About campaign

Luxfarmol» Ltd Company was founded in 2008, in Tvardita town. The company is a resident of the Free Economic Zone.

The enterprise is licensed for conducting pharmaceutical activity and implements the entire technological process from product development to their final packaging.

The first products of our company appeared on the market in 2009. Beginning with March, the same year, our products were sold in Ukraine and CIS countries.

«Luxfarmol» Ltd is currently one of the most successful companies in this area with more than 50 medicinal products.

PROTECTING AND IMPROVING PEOPLE'S HEALTH ALL OVER THE WORLD

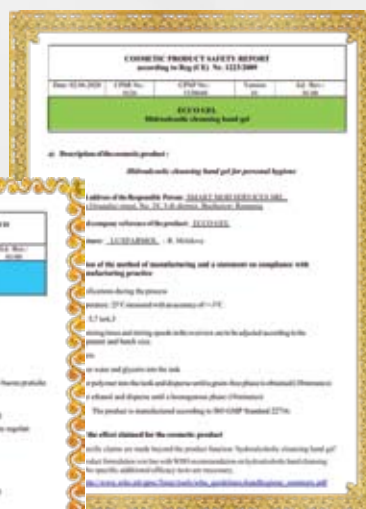

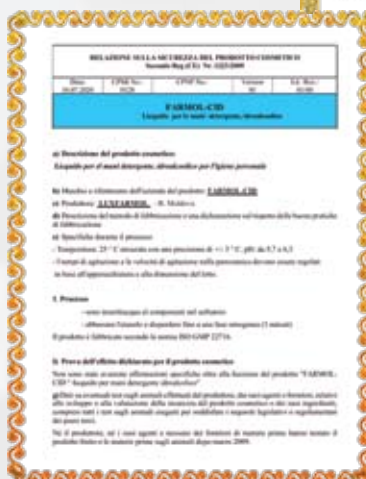

Those who want to protect and improve people's health must do a qualitative research of the missions and be determined to fulfill them. It is important to do our best to understand and admit new opportunities. You have to be dedicated to your own business and be in a constant search for new effective solutions.

These are the goals that keep us together. How we achieve our goals, what principles we adopt and how we interact with our communities.

Together we can contribute to improving the health of people all over the world, regardless of sustainable development principles.

We are constantly striving for improving our products and we do our best to meet modern standards. Our work is under the control of the Medicines Agency. We conduct our activity in compliance with the legislation in force, including security and ecological rules. The production process fully meets international standards.

Luxfarmol products are certified in the Republic of Moldova, Romania, EAEU, Italy, Great Britain and the USA

Our Products

Pharmacy is a complex science-based business. Its success can be measured through the recovery of a large number of people and their well-being. For this reason, our entire product range has the appropriate certificates of registration and quality.

We take care of people's health, but we don't forget about the environment either. We use high quality ethyl alcohol as a raw material for our products, which has no harmful impact on the environment and for consumers.

«Farmol-Cid» — is intended for hygienic and quick treatment of hands and cleansing of various surfaces of daily activity, in domestic conditions of increased hygiene, where disinfection is the basic measure to prevent spread of infections by cleaning the hands of medical staff:

- ✓ in health care institutions for children, schools and preschool institutions, social care institutions (nursing homes for elderly or disabled people), employees of economic enterprises, catering establishments, housing and communal services, patient care equipment, in drugstores and hospitals, in trade networks, in crowded institutions (stadiums, restaurants, customs and border points), as well as army and police units;
- ✓ Quick disinfection is also required in medical institutions, food and catering industry enterprises, laboratory tables, dental chairs, medical equipment, medical means of transportation, refrigerators for health care and food industry.

The disinfectant is a ready-to-use clear, light blue solution, with a smell of alcohol and light perfume fragrance.

Active components:

ethyl alcohol — 70-75%,

benzalkonium chloride — 0.1-0.2%, methylene blue.

The sanitizer is a ready-to-use solution.

HOW TO APPLY

HYGIENIC HAND DISINFECTION

Apply on hands no less than 3 ml. of sanitizer and gently massage until completely dry. Exposure time — no less than 30 seconds. Pay special attention to nails and spaces between fingers.

SURGICAL HAND DISINFECTION

Apply repeatedly on hands 3-6 ml. of disinfectant solution. It is important to cover the entire surface for disinfection with solution. Exposure time — 3 minutes. The sanitizer is applied both, on hands and forearm.

DISINFECTION OF ALCOHOL-RESISTANT SURFACES

Spray or wipe surfaces well (15-20g/1m²) and let dry. Exposure time — at least 30 seconds. No rinsing required.

Sanitizer validity — 5 years.

Antibacterial gel

How to use

Antibacterial hand gel effectively disinfects, refreshes and cleans the skin. It contains glycerin that helps moisturize and soften the skin of hands. This antiseptic does not dry the skin even when frequently used. In just 15 seconds it destroys the most common pathogenic bacteria and microbes. It is indispensable while travelling, outdoor activities and resting in public places. It is an optimal alternative to soap and water.

ECCO antiseptic hand gel, based on ethyl alcohol, destroys 99.99% of the most widespread pathogenic bacteria, fungi and viruses. It contains moisturizers (vitamins).

It softens and refreshes the hand skin.

How to apply

An appropriate amount of gel is massaged on the hand skin until completely absorbed. It is recommended for people with a dynamic lifestyle, parents of newborns and teenagers.

It may be used at home and outside to prevent diseases at work.
